

Telemedicine Website

Project Proposal & Feature List

Doctor • Patient • Super Admin

1. Project Overview

This is an online telemedicine platform where patients can book appointments with doctors and connect with them over a video call (Google Meet) at the scheduled time. The entire system is divided into three user roles — Doctor, Patient, and Super Admin. The platform is designed to keep the booking process simple, fast, and error-free (no double-booking will be possible).

2. Three User Roles

- Doctor — sets their own availability, views patient bookings, and connects with patients over video call.
- Patient — searches for a doctor, books an available time slot, uploads medical reports, and joins the video call.
- Super Admin — manages the entire system, manages doctors and patients, and oversees all bookings.

3. Public Website Pages (Before Login)

Before logging in, anyone visiting the website should be able to browse the platform, learn about it, and find a doctor — without needing an account.

- **Landing / Home Page:** The main page introducing the platform — a short intro, key benefits (easy booking, video consultation, verified doctors), and a prominent 'Find a Doctor' search bar.
- **Find a Doctor:** A searchable, filterable list of all doctors — filter by specialty (e.g. Cardiologist, Dermatologist), availability, rating, or consultation fee.
- **Specialties / Departments Page:** A page listing all medical specialties (e.g. General Physician, Gynecologist, Pediatrician) — clicking one shows all doctors under that specialty.
- **Doctor Profile (Public View):** Public version of a doctor's profile — experience, qualifications, rating, fee, and available time slots, with a 'Book Appointment' button.

- **How It Works Page:** A simple step-by-step explanation of how to book an appointment and join a video consultation, for first-time visitors.
- **About Us Page:** Information about the platform/organization, mission, and trust-building content.
- **Contact / Support Page:** Contact form, phone number, email, and FAQ for visitor queries.
- **Login / Register Page:** Separate sign-up and login options for Doctor and Patient, with simple registration (name, email, phone, password).
- **Testimonials / Reviews (Optional):** Patient feedback and ratings shown on the homepage to build trust with new visitors.

4. Doctor Features

Feature	Description
Dashboard	Shows today's appointments, total bookings, and upcoming calls at a glance.
Availability Settings	The doctor sets which days (e.g. Sunday, Tuesday, Thursday) and which time range (e.g. 10 AM to 2 PM) they are available. Days off can also be marked here.
Booking List	A list of which patients have booked, and when. Each booking shows the patient's name, time, and meeting link.
Google Calendar	Once connected, a Google Meet link is automatically generated for every booking and added to the doctor's calendar.
Video Call / Meet	Join the Google Meet call directly from the dashboard with one click.
Medical Reports	Reports/documents uploaded by the patient during booking can be viewed and downloaded.
Profile Settings	Edit name, specialty, photo, experience, consultation fee, etc.
Patient History	A short list of which patients were seen before and when.

5. Patient Features

Feature	Description
Doctor Search	Doctors can be searched by specialty (e.g., Pediatrician, Cardiologist).
Doctor Profile	Shows experience, rating, consultation fee, and available time slots.
Booking System	Pick a preferred slot and confirm. The system prevents double-booking with real-time notifications.
Report Upload	Upload previous reports, prescriptions, or test results for doctor review.
My Bookings	List of upcoming and past bookings with meeting links.
Join Video Call	Join the Google Meet call with one click at the scheduled time.
Payment	Optional online payment via bKash/Nagad/Card during confirmation.
Profile	Personal details, phone number, and saved past reports.

6. Super Admin Features

Feature	Description
Admin Dashboard	Overview of total doctors, patients, today's bookings, and revenue summary.
Doctor Mgmt	Add, edit, delete, or approve/block doctor accounts.
Patient Mgmt	View patient list and block accounts if necessary.
Bookings Overview	Complete list of appointments with status tracking (confirmed/completed/cancelled).
Revenue Reports	Payment tracking and revenue breakdown by doctor.

Feature	Description
System Settings	Manage general configuration and email/SMS notifications.

7. How the Booking System Works

- The doctor sets which days and time ranges they are available to see patients, from their dashboard.
- The doctor connects their Google account once — after that, a Google Meet link is automatically generated for every booking.
- The patient goes to the doctor's profile and books an available time slot.
- If two patients try to book the same slot, whoever confirms first gets it — the other patient is immediately notified that the slot is no longer available and asked to pick another time.
- As soon as a booking is confirmed, both the doctor and the patient receive a confirmation (email/SMS/notification) along with the Google Meet link.
- During or after booking, the patient can upload their medical report so the doctor can review it in advance.
- At the scheduled time, both parties join the Google Meet call with one click from their respective dashboards.

8. Key Features Summary

- Three separate logins/dashboards: Doctor, Patient, Super Admin
- Doctor availability settings (days and time slots)
- Real-time booking system — automatic error shown if two people try to book the same slot
- Google Calendar & Google Meet integration — automatic meeting link generation
- Booking confirmation notifications (email/SMS)
- Patient medical report/document upload
- Works on both mobile and desktop (Responsive Design)
- Full system control and reporting from the Admin panel

9. Future Roadmap (Optional)

- Online payment gateway (bKash / Nagad / Card)
- Patient review and rating system
- SMS/WhatsApp reminders before appointments
- Prescription generation and download feature
- Multi-language support (Bangla/English)

This proposal is prepared to give a simple, easy-to-understand overview of the entire project so the client can grasp the structure without any technical background. Features can be added or removed as needed.
